Attention: Mr. Donald E. Fleisher
Assistant Superintendent

Subject: Clean-up Area Analytical Results

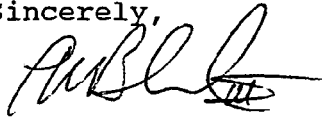

Dear Mr. Fleisher:

Enclosed are the analytical results of the soil samples obtained from the clean-up area west of the two Puget Power aboveground storage tanks and adjacent to the Boeing east fence line. Approximately 30 cubic yards of soil were removed from your site during restoration of the approximate 3600 square feet area.

Please note that the results for the TCLP heavy metals and volatile organics are essentially non-detectable which indicates that the clean-up effort was successful. The area will be backfilled with clean soil and covered with crushed rock by February 22, 1991.

As per the several conversations and meetings between your staff and Boeing, we have cleaned the area to Puget Power requirements. Should you have any questions or concerns, please contact Jenette Ramos at 237-9228.

Sincerely,

L.M. Babich III
Senior Manager, Environmental Engineering
